

RAD Individual Report

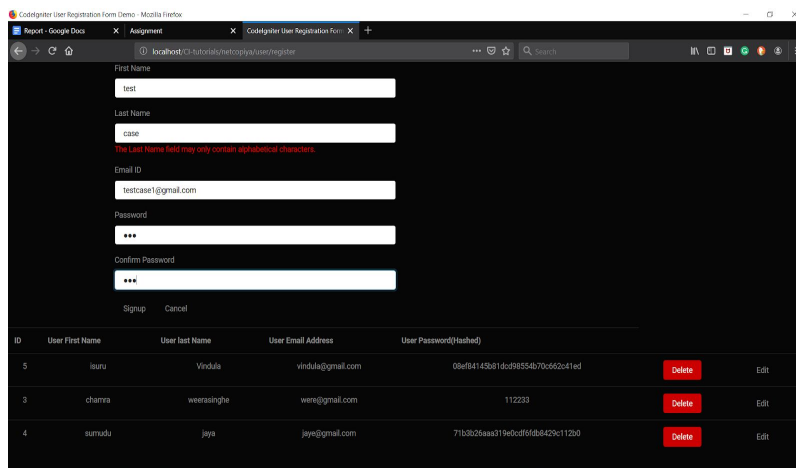

Isuru Vindula

14.06.2019

INTRODUCTION

Wrote CodeIgnitor code for Add/Modify/Delete/Update data for the component I selected from the group assignment for the previous PHP assignment. I have used MVC and Active Record [Design Patterns](#) in my code. This is a short description on the implementation of the selected function. State any assumptions made. Report contains 480x640 screenshots of the implementation and source code.

Create

The screenshot displays a web application interface for user registration. The top section contains a registration form with the following fields: First Name (filled with 'test'), Last Name (filled with 'case'), Email ID (filled with 'testcase1@gmail.com'), Password (masked with '***'), and Confirm Password (masked with '***'). Below the form are 'Signup' and 'Cancel' buttons. A red error message is visible: 'The Last Name field may only contain alphabetical characters'. The bottom section features a table with the following data:

ID	User First Name	User Last Name	User Email Address	User Password(Hashed)	
5	Isuru	Vindula	vindula@gmail.com	08ef04143b0f1d0f98554b70d962c41ed	Delete Edit
3	chama	weerasinghe	were@gmail.com	112233	Delete Edit
4	sumudu	jaya	jaye@gmail.com	71b2b2baas319e0c0f9f0b8429c112b0	Delete Edit
